

SANDWICH TYPE GASKETS

What Is Sandwich Type Gasket?

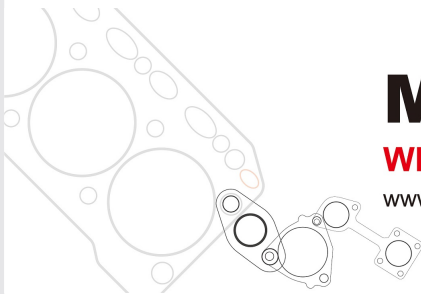

The high temperatures and high pressures in the combustion chamber make it the most difficult area to seal. Sandwich Type are mostly used for turbocharger gaskets, exhaust gaskets and cylinder head gaskets, they have two layers of thin metal such as steel, aluminium, or copper with soft middle layer of core material like graphite or non-asbestos.

△ Sandwich Type Gasket

A good sandwich type gasket is not easy to produce. The technicians should have excellent skills to produce them. If you are thinking about finding a supplier for your sandwich type gasket, feel free to contact us!
